

# *AUTOTROPHS AND HETEROTROPHS*

the feeding levels

Aim: classify the different kinds of living beings into heterotrophs and autotrophs, and distinguish between different levels of autotrophs.

Instructions: the teacher makes a set of cards with different kinds of living beings; each student choose a card. The students will group them like in the diagram on the left, with all the producers in the centre and the consumers arranged in rings (each ring represents a level).

Final questions:

- IS SOMEONE LEFT BEHIND?  
WHAT KIND OF LIVING BEINGS FUNGI ARE?
- ARE THERE ANY LIVING BEINGS THAT CAN BE IN MORE THAN ONE LEVEL?
