

All. 1A

TRUE – FALSE – I DON'T KNOW

The triangle is a quadrilateral	A quadrilateral is a polygon	In a triangle there are 3 heights	A trapezoid is a parallelogram
In a triangle there are 3 diagonals	Obtuse angle: more than 90° and less than 180°	The isosceles trapezoid has 2 different oblique sides	The segment is delimited by 2 points
The incident lines meet in 2 points	A parallelogram has 2 diagonals	The full angle is formed by 2 right angles	A parallelogram has 2 pairs of parallel sides
In the scalene triangle all sides are different	The angle is the part of the plane between 2 segments	Perpendicular lines form 4 angles of 80°	The right-angled triangle has 1 right angle and 2 acute angles
